

Refrigerated Air Dryer

Series *IDF/IDU E*

Air flow capacity **Increased up to the**
max. **40%**

Power consumption **Decreased up to the**
max. **40%**

Refrigerant **HFC134a**
Coefficient of destruction
for ozone is zero.

Improved corrosion resistance
with the use of stainless steel,
plate type heat exchanger
(Except IDF1E to 3E)

	Series	Air flow capacity m ³ /min (ANR)		Applicable air compressor output (Guide) In case of screw type (kW)	Refrigerant	Rated inlet condition	Port size	Pages

Series IDF/IDU E

Selection Method

1 Reading correction factor

Obtain the correction factor (A) to (D) suitable for your operating condition from the graph at left.

IDF selection example

Condition	Data symbol	Correction factor ^{Note)}
Inlet air temperature	40°C	A 0.82
Ambient temperature	35°C	B 0.96
Outlet air pressure dew point	10°C	C 1
Inlet air pressure	0.5 MPa	D 0.88
Air flow rate	0.3 m ³ /min	—
Power supply frequency	50 Hz	—

Note) Values obtained from the table below.

IDU selection example

Condition	Data symbol	Correction factor ^{Note)}
Inlet air temperature	60°C	A 0.95
Ambient temperature	35°C	B 0.93
Outlet air pressure dew point	10°C	C 1
Inlet air pressure	0.5 MPa	D 0.88
Air flow rate	0.4 m ³ /min	—
Power supply frequency	60 Hz	—

Note) Values obtained from the table below.

2 Calculating corrected air flow capacity

Obtain the corrected air flow capacity from the following formula.
 Corrected air flow capacity =
 Operating air flow capacity ÷
 (Correction factor A x B x C x D)

$$\text{Corrected air flow capacity} = 0.3 \text{ m}^3/\text{min} \div (0.82 \times 0.96 \times 1 \times 0.88) = 0.43 \text{ m}^3/\text{min}$$

$$\text{Corrected air flow capacity} = 0.4 \text{ m}^3/\text{min} \div (0.95 \times 0.93 \times 1 \times 0.88) = 0.51 \text{ m}^3/\text{min}$$

3 Selecting a model

Select a model which corrected air flow capacity exceeds the air flow capacity from the specification table. (For air flow capacity, refer to the data below (E).)

According to the corrected air flow capacity of 0.43 m³/min, IDF4E will be selected which air flow capacity is 0.52 m³/min at 50 Hz.

According to the corrected air flow capacity of 0.51 m³/min, IDU4E will be selected which air flow capacity is 0.57 m³/min at 60 Hz.

4 Selecting the type of threads, options and international standards or not.

Refer to page 2 and 8.

Refer to page 5 and 8.

5 Model determination

Refer to page 2.

Refer to page 5.

6 Selecting accessories sold separately.

Refer to page 10.

Note 3) When selecting a power supply voltage, refer to "How to Order" on page 5.

Note 4) Install a circuit breaker with a sensitivity of 30 mA or less.

Operation Principle

Humid, hot air coming into the air dryer will be cooled down by a cooler. Water condensed at this time will be removed from the air by a drain separator and drained out automatically. Air separated from the water will be heated to near ambient temperature by a reheater to obtain the dried air, which goes through to the outlet side.

Series IDF/IDU E Option Specifications 1

Refer to pages 2 and 5 for "How to Order" of options.

A Option symbol

Cool compressed air output IDF all models

There is no heating of cooled, dehumidified air as it leaves the air dryer. The air flow with this option is smaller than that of the standard dryer. (The external dimensions are identical with the standard product.)

Model		IDF1E	IDF2E	IDF3E	IDF4E
Air flow capacity (m ³ /min (ANR))	50 Hz	0.085	0.12	0.18	0.26
	60 Hz	0.1	0.14	0.21	0.29

Model		IDF6E	IDF8E	IDF11E
Air flow capacity (m ³ /min (ANR))	50 Hz	0.32	0.5	0.65
	60 Hz	0.375	0.55	0.75

Conditions: Inlet air pressure: 0.7 MPa, Inlet air temperature: 85°C (Saturation)
Outlet air temperature: 10°C

C Option symbol

Anti-corrosive treatment IDF, IDU all models

This minimizes the corrosion of the copper and copper alloy parts when the air dryer is used in an atmosphere containing hydrogen sulfide or sulfuric acid gas.

Special epoxy coating: Copper tube and copper alloy parts.
The coating is not applied on the heat exchanger or around electrical parts, where operation may be affected by the coating.

H Option symbol

For medium air pressure IDF6E to 11E, IDU3E to 6E

The auto drain is changed from the standard one to one with a medium pressure specification.

A metal case is used for the auto drain.
(The external dimensions are identical to the standard product.)
Maximum operating pressure: 1.6 MPa
Auto drain assembly no.: IDF-S0085
(Auto drain (AD48-2-X2114), thermal insulator, and one-touch fitting are included.)

K Option symbol

For medium air pressure IDF6E to 11E, IDU3E to 6E

The auto drain is changed from the standard one to one with a medium pressure specification.

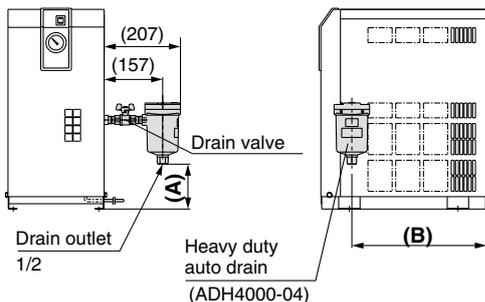

A metal case with a level gauge which can confirm the water level is used for the auto drain.
(The external dimensions are identical to the standard product.)
Maximum operating pressure: 1.6 MPa
Auto drain assembly no.: IDF-S0086
(Auto drain (AD48-2-X2110), thermal insulator, and one-touch fitting are included.)

L Option symbol

With heavy duty auto drain IDF4E to 11E, IDU3E to 6E

The float type auto drain used in the standard air dryer is replaced with a heavy duty auto drain (ADH4000-04) which enables the drainage to discharge more efficiently.

IDF4E, 6E, 8E, 11E
IDU3E, 4E, 6E

Note) The heavy duty auto drain and the drain valve are both enclosed in the same shipping package as the main body of the air dryer. The customer is required to mount the parts to the air dryer.

M Option symbol

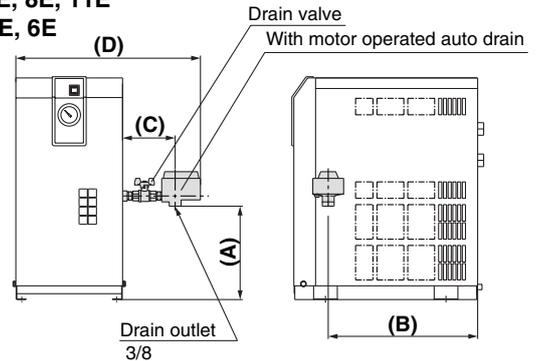

With motor operated auto drain

The float type auto drain used in the standard air dryer is replaced with a motor type auto drain (ADM200) which enables the drainage to discharge more efficiently.

Operating air pressure	Air discharge without drainage
0.3 MPa	6 ℓ (ANR) per cycle
0.5 MPa	10 ℓ (ANR) per cycle
0.7 MPa	14 ℓ (ANR) per cycle

* Operation cycle: 1 cycle per min. Operation time: 2 sec./min.

IDF4E, 6E, 8E, 11E
IDU3E, 4E, 6E

* The motor operated auto drain is enclosed in the same shipping package as the main body of the air dryer. The customer is required to mount the auto drain to the air dryer.

Series IDF/IDU E

Option Specifications 2

Refer to pages 2 and 5 for "How to Order" of options.

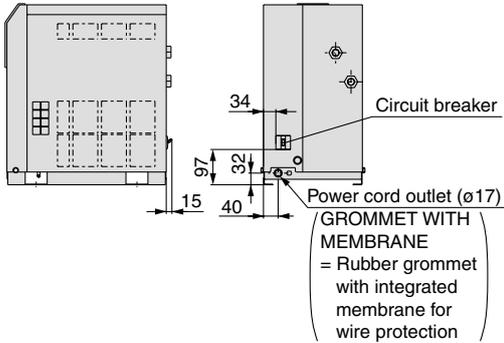

R Option symbol

With circuit breaker

IDF4E to 11E,
IDU3E to 6E

A circuit breaker with cover is attached to the side of the air dryer. This saves additional electrical wiring at the time of installation.

IDF4E to 11E
IDU3E to 6E

	Model	Breaker capacity	Sensitivity current
Type 100 V	IDF4E-10, IDF6E-10 IDF8E-10, IDF11E-10	10 A	30 mA
	IDU3E-10, IDU4E-10 IDU6E-10

Type 200 V	IDU3E-20, IDU4E-20 IDU6E-20	5 A	

T Option symbol

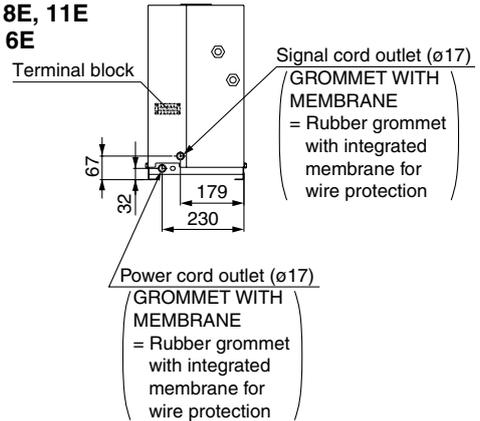

With terminal block for power supply, run & alarm signal and remote operation

IDF4E to 11E,
IDU3E to 11E

Besides terminals for the power supply, terminals for the operating signal and the emergency stop signal are also available. (No-voltage contact) Also, in the case of remote control, operate it from the power supply side while the air dryer switch remains ON.

Contact specification: Max. rated voltage 220 V 3 A
Min. operating current 10 mA

IDF4E, 6E, 8E, 11E
IDU3E, 4E, 6E

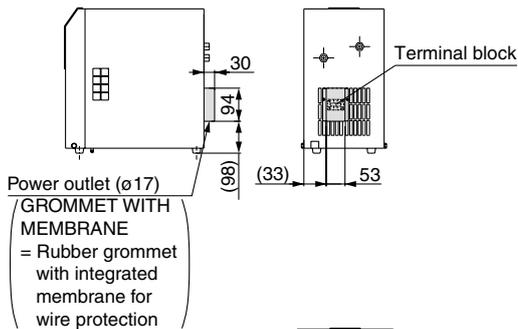

S Option symbol

With power cord connection

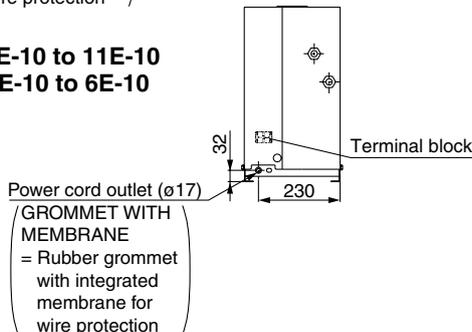

IDF1E-10 to 11E-10,
IDU3E-10 to IDU6E-10

The option allows the connection of a power cord to a terminal block.

IDF1E-10 to 3E-10

IDF4E-10 to 11E-10
IDU3E-10 to 6E-10

Accessory (Option)

Description	Features	Specifications	Applicable dryer	Dimensions
Separately installed transformer 	Power supply and voltage for those other than the standard.	Max. ambient temperature 40°C (Relative humidity 85% or less)	IDF1E-10 to IDF8E-10 IDU3E-10, IDU4E-10	P. 11
Base integrated with a transformer 	A dedicated base for integrating the separately installed transformer and the air dryer.	—		P. 12
Dust-protecting filter set 	Prevents a decline in the performance of an air dryer, even in a dusty atmosphere.	Max. ambient temperature 40°C	IDF1E to 11E IDU3E to 6E	P. 12
Bypass piping set 	Easy bypass piping (connect this set to the air dryer), allowing substantial reduction in the installation time.	Max. operating pressure 1.0 MPa Max. operating temperature 60°C		P. 13

Technical Data

Condensed Water Calculation

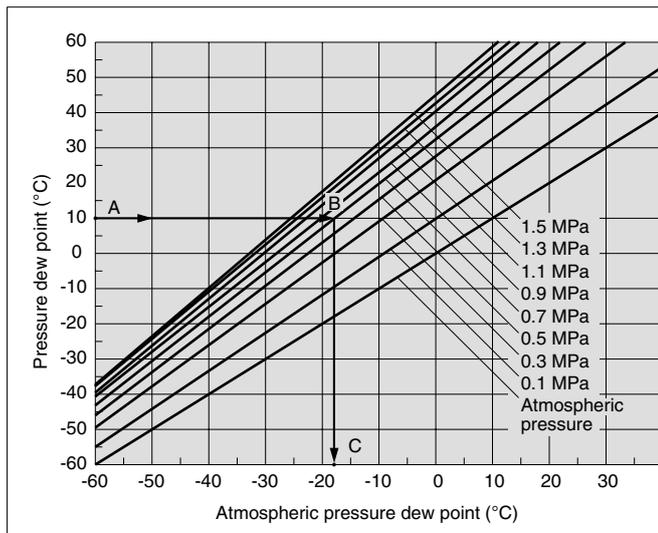

<How to calculate the amount of condensed water>

Example) To obtain the amount of condensed water when the inlet air of a compressor is pressurized to 0.7 MPa then cooled down to 25°C. Given an ambient temperature of 30°C and a relative humidity of 60%.

- ① Trace the arrow mark, from point A of ambient temperature 30°C to obtain the intersection B on the curved line for the relative humidity of 60%.
- ② Trace the arrow mark, from the intersection B to obtain the intersection D on the curved line for the 0.7 MPa pressure characteristics.
- ③ Trace the intersection D to obtain the intersection E.
- ④ The intersection E is the dew point under pressure 0.7 MPa with an ambient temperature of 30°C and a relative humidity of 60%. The value for E is at 62°C.
- ⑤ Trace the intersection E upward, and C leftward to obtain the intersection D.
- ⑥ The intersection C is the amount of water included in the compressed air (1 m³ at 0.7 MPa) with a pressure dew point of 62°C. The amount of water is 18.2 g/m³.
- ⑦ Trace the arrow mark, starting with F for cooling temperature 25°C (pressure dew point 25°C) to obtain the intersection G on the pressure characteristic line for 0.7 MPa.
- ⑧ From the intersection G, trace the arrow mark to obtain the intersection H on the vertical axis.
- ⑨ The intersection H is the amount of water included in the compressed air 1 m³ at 0.7 MPa, pressure dew point of 25°C. The amount of water is 3.0 g/m³.
- ⑩ Therefore, the amount of condensed water is as following. (per 1 m³)
The amount of water at the intersection C
- the amount of water at the intersection H
= the amount of condensed water
18.2 - 3.0 = 15.2 g/m³

Dew Point Conversion Chart

<How to read the dew point conversion chart>

Example) To obtain the atmospheric dew point at a pressure dew point of 10°C, and a pressure of 0.7 MPa.

- ① Trace the arrow mark →, starting from point A at a pressure dew point of 10°C to obtain the intersection B on the pressure characteristic line for 0.7 MPa.
- ② Trace the arrow mark →, starting from point B to obtain the intersection C at the dew point under atmospheric pressure.
- ③ The intersection C is the conversion value -17°C under atmospheric pressure dew point.
